(54) Title: ELECTRICAL TERMINAL CONNECTION, ESPECIALLY FOR CONNECTING AN OUTER CONDUCTOR OF A COAXIAL CABLE

(54) Bezeichnung: ELEKTRISCHE ANSCHLUSSVERBINDUNG, INSbesondere FÜR DEN ANSCHLUSS EINES AUSSENLEITERS EINES KOAXIALKABELS

(57) Abstract: The invention relates to an electrical terminal connection, especially for connecting an outer conductor of a coaxial cable, characterised by the following novel developments: the electrical terminal connection is embodied in a two-stage manner; the plug-in element (1) comprises at least two plug-in sections (111a, 111b) which are staggered in the plug-in and axial direction, both the first plug-in section in the plug-in direction and the following plug-in section (111a, 111b) being provided with a knurl (27) on the outer periphery thereof; the receiving opening (3) comprises a first receiving section and a second receiving section (211a, 211b) which are staggered in the plug-in and axial direction of the plug-in element (1); and the cross-sectional size of the two plug-in sections (111a, 111b) and the two complementary receiving sections (211a, 211b) provided with the knurl (27) is slightly larger than the radial or outer dimension of the receiving section (211a, 211b) respectively co-operating therewith.
